PROFESSIONAL SUMMARY

QA Engineer with 1+ year of experience on testing web and mobile apps in remote Agile teams. Strong in functional, regression, and exploratory testing; Jira defect lifecycle; and end-to-end validation of fixes. Built Playwright automation (Python/JavaScript) and API checks with CI(optional) and reports.

CORE SKILLS

Testing: Functional, Regression, Exploratory, Smoke; test cases, checklists, test plans, test evidence

Tools: Jira, Postman, DevTools, Git/GitHub, Android Studio, 3uTools

Automation: Playwright (Python/JavaScript), Pytest, Page Object Model basics, GitHub Actions CI

Technical: APIs, HTTP methods/status codes, HTML/CSS/JavaScript

EXPERIENCE

Manual QA Intern | a1qa | Jan 2025 - July 2025

- Developed and executed test cases and checklists for web and mobile features; cover positive, negative, and boundary scenarios ISTQB style.
- Ran regression and exploratory sessions each sprint to verify requirements, investigate edge cases, and expand coverage.
- Report defects in Jira with clear steps, expected/actual results, environment details, and supporting artifacts(recordings and screenshots when needed); re-tested fixes and ran smoke checks.
- Used DevTools and Charles Proxy to inspect requests, reproduce issues, and capture logs/recordings when needed.

Logistics Supervisor | AGE Energy | 2022-2023 |

- Coordinated daily logistics operations and delivery routes; ensured on-time execution and clear stakeholder communication.
- Tracked KPIs in Excel and improved reporting cadence for operational visibility and decision-making.

AUTOMATION PROJECTS

QA Automation Site (Playwright + Pytest + FastAPI) | [GitHub](#)

- Built automated UI tests for login and contact form, covering positive, negative, and boundary scenarios; cross-browser.
- Added API checks and a GitHub Actions CI workflow; generated HTML test reports.

Automation Test Store (Playwright + JavaScript/TypeScript)

- Automated user stories flows with stable selectors and reusable helpers.
- Implemented Page Object Models and centralized test data to keep the suite maintainable and scalable.
- Implemented fixtures to call methods without having to declare them in each test.

Pet API Automation Store (Playwright + JavaScript/TypeScript)

- Automated GET,POST,PUT,DELETE API requests.
- Added edge cases for each endpoint (GET, POST, PUT, DELETE) to validate responses for invalid data or routes.
- Refactored the tests to use dynamic data, avoiding fixed IDs and dependency on public API state.
- Improved test structure and clarity based on mentor feedback, using variables for host/endpoint and explanatory comments.

EDUCATION & CERTIFICATIONS

B.S. Systems Engineer

EPAM: Cloud & Automation Tools Fundamentals

Cambridge English Certificate - B2/C1 level

LANGUAGES

Spanish: Native | English: B2/C1
