ABOUT

I'm a QA Engineer who builds with AI. Where I add the most value is early — when requirements are still being defined, before a single line of code is written. The earlier QA gets involved in the SDLC, the fewer bugs make it to production. That's always been true. With AI in the mix, it matters even more.

My edge is knowing what to ask, what to question, and when the output is wrong — even when it looks right. AI moves fast. Catching what it gets wrong, early, is where I shine.

EXPERIENCE

- Jr QA Engineer** · [A1QA](#)

Jan 2025 – July 2025

 - Designed and executed automated test suites for web and API platforms using Selenium, Playwright, and Python.
 - Developed AI-assisted test cases and scripts, improving test coverage and cutting manual effort significantly.
 - Performed SQL-based backend validations and API testing with Postman and Pytest.
 - Integrated CI/CD pipelines with GitHub Actions and Docker for continuous testing and deployment.
 - Collaborated with QA peers and developers in Agile/Scrum to validate fixes and improve test coverage.
- Operations & Logistics Coordination** · [Previous Role](#)

2+ years

 - Coordinated daily operations, tracked deliverables, and communicated across teams under pressure.
 - Built a process-control mindset: prioritization, impact analysis, and unblocking issues fast.
